

## SET Software Products

SET is a powerful **online and offline event management system** for any type of event, including tournaments and seminars. SET **supports all phases of the tournament management process** from event creation, collection of registrations, draws and entry fee management, to the generation of reports, statistics and much more. SET can directly connect to and use the SET Online database. SET supports **WKF, IPPON, NIHON** and **SANBON SHOBU** rules.

In addition to user, club, nation, coach, referee and entry management, SET also provides easy communication between users and organizers through forums, picture galleries, maps, news feeds, route plans, e-payment solutions and an array of other features. Moreover, SET Online can also serve as an additional platform to promote events.

WKF APPROVED

## Software solutions for professional event management

## SET Software Application Framework

Any SET application can be used as stand-alone. All SET applications when used together form a framework for optimal event management. All SET software products can be integrated into one homogeneous system. Any phase of this process can be electronically managed to save time, resources, effort and money for all parties.
